

In the Claims:

Please cancel without prejudice claims 1 - 19

Please add claims 20 - 43.

20. (new) A method for televising the interior of a pipeline, comprising the steps of:

- attaching a camera to a transporter;
- connecting electrically a power control unit to said camera;
- connecting electrically a communication module to said power control unit;
- connecting a receiver to said communication module;
- placing said transporter in a pipeline;
- providing a master control module having a transmitter;
- transmitting an electrical signal from said master control module to said receiver to control the movement of said transporter.

21. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

- providing the pipeline with a manhole, lowering said transporter into the manhole, manipulating the operation of said transporter when lowering thereof.

22. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

- providing an electrically powered tractor for said transporter.

23. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

disabling electrical power to said transporter when said master control module is a predetermined distance from said said communication module.

24. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

transmitting from said master control module to said communication module through an opaque barrier.

25. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

providing a master control module with an on-off keyed signal.

26. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

providing a video monitor for viewing the output of said camera.

27. (new) The method for televising the interior of a pipeline of claim 20, further comprising the step of:

providing a reel of electrical cable connected between said power control unit and said transporter, displaying the distance traveled by said transporter by monitoring the movement of said

electrical cable with an encoder.

28. (new) A method for televising the interior of a pipeline, comprising the steps of:

attaching a camera to a transporter;

connecting electrically a power control unit to said camera;

connecting electrically a communication module to said power control unit;

attaching said communication module to an exterior of said of power control unit;

connecting a receiver to said communication module;

placing said transporter in a pipeline;

providing a master control module having a transmitter;

transmitting an electrical signal from said master control module to said receiver to control the movement of said transporter.

29. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

providing the pipeline with a manhole, lowering said transporter into the manhole, manipulating the operation of said transporter when lowering thereof.

30. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

providing an electrically powered tractor for said transporter.

31. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

disabling electrical power to said transporter when said master control module is a predetermined distance from said said communication module.

32. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

transmitting from said master control module to said communication module through an opaque barrier.

33. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

providing a master control module with an on-off keyed signal.

34. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

providing a video monitor for viewing the output of said camera.

35. (new) The method for televising the interior of a pipeline of claim 28, further comprising the step of:

providing a reel of electrical cable connected between said power control unit and said transporter, displaying the distance traveled by said transporter by monitoring the movement of said

6

electrical cable with an encoder.

36. (new) A method for televising the interior of a pipeline, comprising the steps of:

attaching a camera to a transporter;

connecting electrically a power control unit to said camera;

connecting electrically a communication module to said power control unit;

retaining said communication module inside said power control unit;

connecting a receiver to said communication module;

placing said transporter in a pipeline;

providing a master control module having a transmitter;

transmitting an electrical signal from said master control module to said receiver to the control the movement of said transporter.

37. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:

providing the pipeline with a manhole, lowering said transporter into the manhole, manipulating the operation of said transporter when lowering thereof.

38. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:

providing an electrically powered tractor for said transporter.

39. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:

disabling electrical power to said transporter when said master control module is a predetermined distance from said said communication module.

40. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:

transmitting from said master control module to said communication module through an opaque barrier.

41. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:

providing a master control module with an on-off keyed signal.

42. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:
providing a video monitor for viewing the output of said camera.

43. (new) The method for televising the interior of a pipeline of claim 36, further comprising the step of:
providing a reel of electrical cable connected between said power control unit and said transporter, displaying the distance traveled by said transporter by monitoring the movement of said electrical cable with an encoder.

C O N C L U S I O N

Accordingly, applicant respectfully requests that the Examiner enter this amendment, allow the claims, and pass this application on to issue.

Respectfully submitted,

Donald J. Ersler
Reg No. 38,753
